How many Watts Does a 12V inverter use?

Its efficiency rating will determine how many watts it consumes. A low efficiency inverter will draw more watts or amps from the battery. This will lead to faster battery depletion and shorten the runtime. Batteries also discharge faster when more amps are drawn. The UPG 100ah 12V battery should hold 1200 watts and last for an hour.

Is a 1200 watt inverter enough?

For example, a portable AC unit might need 1000 running watts but 2500 watts to start up. In that case a 1200 watt inverter is not enough. Its running watt capacity is sufficient but the surge watts is not. Almost all inverter surge watt capacity is twice its running watts.
