
Aluminum is an energy storage product

Can aluminum ion batteries revolutionize energy storage?

Aluminum is also a critical component in other low carbon technologies including wind, energy storage and hydroelectricity. The metal is used widely in both on-shore and off-shore wind projects, including tower platform components and turbines. And aluminum-ion batteries have the potential to revolutionize energy storage systems.

Can energy be used for aluminum production?

Norgate and Haque (2010) performed LCA of aluminum production and investigated the results of energy (coal, natural gas, and hydroelectricity) used in various processing routes of aluminum production and carbon emissions.

What is aluminum used for?

With its lightweight strength and unmatched corrosion-resistance and durability, aluminum is widely used to build renewable energy platforms like solar panels and wind turbines. As the world moves toward an increasingly renewable future, aluminum is helping to lead the way.
