What is a battery inspection checklist?

Regular battery inspections assist to ensure optimal performance & safety. Following this checklist makes sure that all important components are evaluated and any necessary steps are performed to keep the system operational. This detailed Battery Inspection Checklist ensures battery performance and safety.

What is a battery inspection?

The first level of inspection involves a thorough visual examination of the battery's physical condition. This step checks for any mechanical or structural faults that could hinder performance. Mark "OK," "Not OK," or "N/A" in the appropriate boxes for each point.

What tests are conducted at the Offenbach battery test facility?

Below are some of the most sought-after tests conducted at our Offenbach battery test facility. The UN 38.3 transport test is a globally mandated safety standard for the transport of lithium batteries and lithium cells.

What testing systems are available in our battery labs?

Our Battery Labs have shock and vibration testing systems with a maximum force vector of 120 kN, mounting surfaces of 1.20 x 1.20 m and a maximum load of up to 1,000 kg. Shaker tests are also possible under thermal and climatic superposition with simultaneous loading/unloading.
