
Battery pack subsidy

Are battery subsidies a good investment?

For those concerned about investment returns, battery subsidies are shortening payback periods. Research shows that a battery subsidy could reduce the expected payback period by approximately 36% shorter by 2030, making home energy storage increasingly cost-effective. What are the benefits of solar and non-solar homes?

Will the cheaper home batteries program slash power bills?

"The Cheaper Home Batteries Program will not only slash power bills for 10 million Australians with solar but also ensure all Australians are at least \$1.3 billion better off in 2030 through reduced wholesale electricity costs". John Grimes Chief Executive Smart Energy Council Are you a battery installer?

What is the \$2.3 billion cheaper home batteries program?

The \$2.3 billion Cheaper Home Batteries Program is now available to help more people install batteries. Australia is a world leader in rooftop solar with more than 4 million rooftop solar photovoltaic (PV) systems. However, before the program, only one in 40 households had installed batteries.

How much does a battery subsidy cost?

The subsidy will provide a maximum of \$372 per kWh of usable battery capacity. This is expected to be reviewed annually, and the actual reduction will likely be slightly less when accommodating administrative fees. While there's money to be saved long-term, to qualify for the deal, the batteries must be compatible with VPPs (Virtual Power Plants).
