## Battery with inverter

What type of battery does an inverter use?

The inverter incorporates a lithium-ion battery with a voltage range of 180-750 V and a maximum charge/discharge current of 25 A. According to the manufacturer, the inverter backup port can be connected to inductive loads such as air conditioners, hairdryers or water pumps.

What are the different types of solar inverter batteries?

There are three main types of solar inverter batteries: lead acid, nickel-cadmium, and lithium ion. Lead acid batteries are the oldest type of battery and are still used in some applications. They have a longer life but are heavier and more expensive.

Which battery is best for a sine wave inverter?

Deep-cycle batteries work best for your sine wave inverters. Here's why: They can get discharged and recharged multiple times and produce steady power over an extended period. Deep-cycle batteries have low internal resistance. So, they don't get hot when you charge them up with solar power, unlike other lead-acid batteries.
