# **Data Center Using Foldable Containers for Network Connection**

What is a containerized data center?

A containerized data center, also known as a modular data center, is a data center within a container. For companies that need to increase IT capacity quickly, affordably and temporarily, containerized data centers are a great option, and customized modular data centers can more permanently scale services and support.

What is a containerised data centre?

Containerised Data Centres ISO containers offer a flexible format for Mobile Data Centre's, Telecoms Cabin's, Secure Buildings / SCIF's, Power and Cooling and a wide range of other commercial and defence sector applications.

What is a modular container data center?

Canovate's modular container data centers offer long-term cost savings with energy-efficient designs, quickly meeting your data processing needs. Container data centers provide ideal solutions for data processing needs requiring mobility, flexibility, and speed.

What is a container data center?

Financial Services: Financial institutions can utilize container data centers to accommodate sudden spikes in data processing demands, ensuring business continuity.

Military and Defense: Container data centers provide secure data processing solutions for mobile operations in military environments, such as border areas or conflict zones.
