# Do solar panels generate electricity when installed

What is solar energy & how does it work?

Solar energy is a renewable, sustainable, and increasingly popular way to generate electricity for homes, businesses, and off-grid applications. This guide provides an in-depth overview of how solar panels work, the key components of a solar power system, and practical advice on installation, maintenance, and troubleshooting.

How do solar panels generate electricity?

This is where electricity generated by the panel flows into an electrical system of a home or a power grid. Now that you understand how solar panels are constructed, let's dive into how they generate electricity. There are two primary ways in which solar panels generate electricity: thermal conversion and photovoltaic effect.

Do solar panels generate electricity during the day?

Solar panels require sunlight to generate electricity, so they do not generate electricity during the day. However, home solar systems typically generate excess electricity during the day, which can be stored in batteries or sent to the local grid in exchange for net metering credits.

How does home solar power work?

Here's a step-by-step overview of how home solar power works: Excess solar energy is stored in batteries or pushed onto the grid to power local systems (like your neighbor's house!) Now that we've covered the basics, let's break down how solar panels work in more detail. How does solar power work? The photovoltaic effect explained
