
Getting Started with Outdoor Power

How do you bring power outdoors?

The fastest way to bring power outdoors is to install a receptacle directly behind an existing indoor outlet. Alternatively, you can drill through the wall from a basement or crawlspace and attach a receptacle on the house exterior using an extension ring. Position your outdoor receptacle at least 16 inches above the ground to prevent water damage.

How do you run power outdoors?

Mr. Electric outlines the safest methods for running power outdoors. Plan your route and power needs. Use weatherproof, outdoor-rated conduit and wiring. Dig trenches for underground cables, following local codes. Install GFCI outlets for safety. Test the system before use. Test the system before use. Looking to 'amp up' your outdoor experience?

To provide you with some detail on the process of installing electricity outside, whether that's for outdoor lighting or a much larger project, below is everything you need to know.

How do I supply electricity to a garden building?

To provide electricity to an outdoor building, such as a shed, garden office or summer house, you must run an armoured cable from your main house supply to the external building. Ideally, this cable should be buried underground (usually 600mm deep) and connected to a new consumer unit installed in the garden building.
