# How many watts of solar power does Spain generate

Is solar energy the second largest energy source in Spain?

In 2023, solar photovoltaic energy, for the first time ever, became the second largest energy source, accounting for 20.8 % of the total installed capacity in the Spanish mainland (compared to 17.1 % in 2022) and surpassing combined cycle, which dropped to third place with a share of 20.5 % of the total installed generation capacity.

Does Spain have solar energy?

Currently, Spain ranks third in the EU for its share of solar energy in the electricity mix, behind Hungary and Greece. In terms of total solar generation, Spain is second only to Germany. This impressive progress underscores Spain's commitment to renewable energy and its ability to leverage its natural resources for sustainable growth.

Can Spain become a solar power superpower?

Spain experienced the largest growth in photovoltaics in Europe for the second consecutive year, adding 11 TWh of solar-generated electricity in 2024. Renewable energy expert Daniel P&#233;rez highlights Spain's potential, noting that the country receives 50% more sunlight than Germany and has the capacity to become a global solar energy superpower.

What is Spain's biggest energy source?

While Spain leads in solar power, nuclear energy remains the EU's largest energy source, generating 24% of electricity, followed by wind power at 17%. Gas continues to decline, dropping to 16%, marking its fifth consecutive year of reduced share in the energy mix.

Spain's solar surge: Leading Europe's renewable revolution Spain has solidified its position as a frontrunner in Europe's renewable energy movement, with its photovoltaic (PV) ...

FOR the second year running, Spain has registered the biggest growth in solar energy in Europe according to the European Electricity Review 2025. Solar now accounts for ...

Spain: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on ...

Spain marked a clean energy milestone in July 2025, according to APPA Renovables' latest monthly report. Renewables generated 13,871 GWh, covering 55.1% of the ...

In 2023, solar photovoltaic energy, for the first time ever, became the second largest energy source, accounting for 20.8 % of the total installed capacity in the Spanish ...

Over the past 12 months, from November 2024 to October 2025, Spain has made notable strides in clean electricity generation. A ...

Spain's solar PV capacity reached 6 GW in 2024, making it the country's top power source with a 25.1% share, surpassing wind at ...

---

The extensive solar resources available in Spain, combined with the reduction in costs for solar panels and installation, make it an ideal location for solar energy generation. ...

Discover how Spain is leading the way in solar energy adoption, with photovoltaics accounting for 21% of electricity generation.

Renewable energy is currently experiencing substantial development in Spain. With the goal of reaching climate neutrality by ...

Renewable energy is currently experiencing substantial development in Spain. With the goal of reaching climate neutrality by 2050, the country is implementing measures to ...

Spain marked a clean energy milestone in July 2025, according to APPA Renovables' latest monthly report. Renewables ...

Spain: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the ...

Over the past 12 months, from November 2024 to October 2025, Spain has made notable strides in clean electricity generation. A significant portion of Spain's electricity, more ...
