How to connect multiple terminals to the base station

How do I connect two base stations?
Mount your base stations in their chosen position. Use the supplied mounting kit if necessary or you can place them on a solid surface. Plug in each base station into power. If you are using the wired sync cable (for increased reliability) to connect the two,then one base station should be channel A and the other should be channel B.

How do I connect a base station to a network?
To connect the Yealink DECT IP Phone base station to a network,use method a or method b. For method a,use the supplied power adapter (5V/600mA). For method b,no power adapter is needed,but ensure the hub/switch is PoE-compliant.

Do I need to connect my base stations to each other?
In general,you don"t needto connect your base stations to each other with the sync cable. However,if you have a hanging object from the ceiling that is above the play area or if your base stations need to be positioned low such that your head or hands block the bases from seeing one another,this may affect the syncing of the base stations.

How do I set up a base station?
Make sure they are positioned at a height of about 6.5 to 7.5 feet (2 to 2.3 meters). Connect the Base Stations: Each Base Station should be connected to a power source using the provided power adapter. Ensure that they are properly plugged in and receiving power.
