
How to make power cord for battery cabinet

How do I make new battery cables?

Making new battery cables isn't difficult, however, and you won't need complex machinery to do it. Lift the hood and check the battery, as well as all connected lines and cables, for rust, corrosion or bad connections. Before making new cables, check which ones actually need to be replaced.

How do you connect a battery charger to a door?

Add each of the chargers to the door and route the wires inside. Plug in each of the wires into the power strip and tie up any extra wire using velcro cord organizers. For the smaller chargers that have a large plug, I placed them on the top shelf and plugged them into the power strip.

How do you cut a battery cable?

You can use your terminal lugs (the piece that attached to the battery) to estimate how much you should cut away. Simply line it up with the cable and note how long the hole is, then cut away enough rubber so that the actual metal cable fits in snugly. Don't worry if you cut too much away -- you will be re-sheathing the cables later.

What to do with bad battery cables?

Some companies actually sell terminals pre-loaded with flux and solder. Alternatively, use the bad cables to purchase replacement parts from your local auto shop or hardware store. Bring in the bad battery cables to ensure you get the right replacements for your car or boat if you don't know what to get.

Learn how to build a DIY battery charging station to charge all types of batteries in your workshop including power tool batteries and camera batteries.
