
Paraguay Super Lithium Ion Capacitor Series

What is a lithium ion capacitor module?

Self discharge: LICs have significantly lower self-discharge rate. LICs have extremely low leakage current at 50% SOC. The Lithium Ion Capacitor Module is a super-capacitor also called an ultra-capacitor. This system consists of four 3300F Prismatic cells packed in a modular form.

What is the energy density of lithium ion capacitor?

The energy density of lithium ion capacitors (LICs) is 2-4 times that of supercapacitors EDLC or Supercap, and the power density is similar to that of supercapacitors. Electrical values can be monitored. Lithium Ion Capacitor (LIC) is a safe and reliable component.

What is the difference between EDLC and lithium ion capacitor module?

Rated Voltage: LIC requires about 2/3 fewer cells than EDLC for same voltage module. Self discharge: LICs have significantly lower self-discharge rate. LICs have extremely low leakage current at 50% SOC. The Lithium Ion Capacitor Module is a super-capacitor also called an ultra-capacitor.

Is lithium ion capacitor safe?

Lithium Ion Capacitor (LIC) is a safe and reliable component. It has been tested for safety including capacitor body penetration, external pin short circuit, and external impact on the body. There is no doubt about fire, expansion, rupture, etc., and it is a safe and reliable component.
