# Parallel connection of battery packs in solar container communication stations

Is parallel connection safe in battery energy storage systems?

36. Jocher,P. ? Steinhardt,M. ? Ludwig,S. ... Parallel connection of cells is a fundamental configuration within large-scale battery energy storage systems. Here,Li et al. demonstrate systematic proof for the intrinsic safetyof parallel configurations,providing theoretical support for the development of battery energy storage systems.

Why are batteries connected in parallel?

Cells are often connected in parallel to achieve the required energy capacityof large-scale battery systems. However,the current on each branch could exhibit oscillation,thus causing concerns about current runaway or even system divergence.

What happens if a lithium-ion battery is connected parallel?

Uneven electrical current distribution in a parallel-connected lithium-ion battery pack can result in different degradation rates and overcurrent issues in the cells. Understanding the electrical current dynamics can enhance configuration design and battery management of parallel connections.

What are the features of cell balancing in parallel connections?

The features of cell balancing in parallel connections are summarized. Recommendations of reducing cell imbalances in parallel connections is proposed.
