# Peak and valley electricity consumption home energy storage

How do C&I energy storage projects benefit from Peak-Valley arbitrage?

C&I energy storage projects in China mainly profit from peak-valley arbitrage while reducing demand charges by monitoring the inverters' power output in real time to prevent transformers of industrial parks from exceeding their capacity limits.

Why should businesses use energy storage systems?

Use of Energy Storage Systems: By storing energy during low demand periods and utilizing it during peak times, businesses can effectively shave off the excess demand that leads to higher costs.

Why is the C&I energy storage sector growing?

Since July, as the country experienced peak electricity demand, more and more provinces have varied electricity charges for different seasons, expanding the peak-to-valley spread and fostering growth in the C&I energy storage sector.

What is Energy Management System (EMS) & PV storage system?

Pairing Energy Management System (EMS) with PV storage system provides a clean and efficient way to utilize local renewable resources. By dispatching shiftable loads and storage resources, EMS could effectively reshape the electricity net demand profiles and match customer demand and PV generation.
