Most power banks deliver the standard 5V power output. However, if you require to charge a device that requires a 12V input, then you need to get a power bank that is capable of delivering the extra power. Usually, this is done via a USB port, a 12V DC port, or via a car cigar lighter type of port.

What is the difference between a 12V and a 24V power bank?

The main difference between a 12V power bank and a 24V power bank is the amount of power stored. A 24V power bank can store twice the power of a 12V power bank with the same "Ah" rating. The energy stored in the battery is determined by multiplying the voltage by the battery Ampere hour.
