
Power lines entering the base station should be avoided

What precautions should be taken when working near electric overhead power lines?

The law says that any work near electric overhead power lines must be carefully planned and carried out to avoid danger from accidental contact or close proximity to the lines. The precautions necessary will depend on the nature of the work at the site and will be required even when work near the line is of short duration.

Should lifting operations near overhead power lines be safe?

When it comes to lifting operations near overhead power lines, safety must always come first. The UK's Health and Safety Executive (HSE) provides clear guidance under GS6 - Avoiding danger from overhead power lines.

Are overhead power lines safe?

Power lines carry high voltages and are usually not insulated, making it possible for workers to suffer burns, electrical flashes or even electrocution if they come into contact with them. To stay safe: Always maintain at least a safe distance from overhead power lines when operating equipment or working in the area.

What is E of danger from overhead power lines?

E OF DANGER FROM OVERHEAD POWER LINES PE323PURPOSE This document provides guidance and sets out the arrangements that shall be followed when work near overhead power lines is to be undertaken and where there is a risk of contact with the wires. This document describes the step
