
Solar panel 18v

What is the difference between 18v and 12V solar panels?

Batteries are nearly always rated at 12V. 18V solar panels are often used with 12V batteries to ensure the current always flows from the higher potential (solar panel) to the lower (battery) and not the other way. However, panels compatible with 12V batteries are often referred to as 12V solar panels.

Which solar panel is most efficient?
