## **Solar panels replaced with solar panels**

Can you put solar panels on a old roof?

If your roof is old, the answer is no--at least not until you replace it. Asphalt shingles that are 10 years old or more should be replaced before adding a solar array on top, says Ana Almerini, a spokesperson for SolarReviews. New solar panels are warrantied to last, on average, 25 years, while most roofs are warrantied for 30 years or less.

How do you install solar panels on a metal roof?

Clamps that attach to the bolts or seams are commonly used. Following the specific guidelines provided by your racking system is necessary due to the variety of metal roof configurations available. For flat or low-slop roofs, a ballasted mount system is ideal for solar panel installation. This method doesn't involve any drilling into the roof.

How to install solar panels?

Connecting the electrical system is an important step in solar panel installation. Depending on your design, start by wiring the panels together in series or parallel. Now, connect the panels to the inverter. It converts the direct current (DC) electricity generated by the panels into usable alternating current (AC) power.

How do I know if my roof is suitable for solar?

Before installing solar panels, assess your roof to ensure it is suitable for solar installation. Start by examining the roof's condition. It should be sturdy and have at least 10-15 years to function. If the roof is damaged, consider repairing or replacing it to avoid complications later.

Before you install solar panels on your roof, find answers to these 8 questions to make sure solar will save you money and energy.
