## **Solar panels solar panels new energy vehicles**

Which electric cars have solar panels?

Another electric car -- well, a plug-in hybrid electric vehicle (PHEV) -- with solar panels is the 2021 and 2022 Hyundai Sonata Hybrid. This vehicle boasts a 200-watt solar roof that converts sunlight into electrical energy. Hyundai claims this small-scale solar system can add about 800 miles of range annually.

Can solar panels make electric cars more efficient?

One advancement in the works that may push electric cars even closer to mass adoption is integrating solar panels into electric vehicles (EVs). By using the sun's rays for extra fuel, an electric car with solar panels can extend its driving range and provide an innovative way to generate power and reduce reliance on conventional charging methods.

How do solar-powered electric cars contribute to the grid?

This technology can revolutionize how solar-powered electric cars contribute to the grid by enabling bidirectional energy flows. These solar-powered cars can consume electricity from their solar panels and feed excess power that their solar panels generate back into the grid for other vehicles to consume.
