
The latest energy site in China

Does China have a new energy industry?

In the context of the global energy transition from fossil fuels to renewable energy sources, China's legions of wind turbines and seas of photovoltaic panels are quite eye-catching. China's new energy industry has experienced rapid growth in recent years, maintaining a double-digit annual growth rate.

How is China reshaping energy choices?

China's surge in renewables and whole-economy electrification is rapidly reshaping energy choices for the rest of the world, creating the conditions for a decline in global fossil fuel use. Clean generation growth led by solar and wind met 84% of China's electricity demand growth in 2024.

Why is China pursuing green energy?

From the land to the sea, China's pursuit of green energy has promoted the development of wind power and solar power industries. In the context of the global energy transition from fossil fuels to renewable energy sources, China's legions of wind turbines and seas of photovoltaic panels are quite eye-catching.

How has China's energy industry changed over the years?

China's new energy industry has experienced rapid growth in recent years, maintaining a double-digit annual growth rate. Since 2013, the country's wind power and solar power installed capacity have grown six times and more than 180 times respectively.

English translations of Chinese energy policy, news, and statistics. Focused on wind power, PV, solar, biomass and other renewable energy. 10+ year archives of Chinese energy policy & ...

World Energy Investment 2025 - Analysis and key findings. A report by the International Energy Agency.

The project could aid global efforts to slow climate change, by helping China - now the world's largest carbon emitter - wean off coal-powered energy.

China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. This is in addition to China's ...

In the context of the global energy transition from fossil fuels to renewable energy sources, China's legions of wind turbines and seas of photovoltaic panels are quite eye ...

A 500 MW / 2,000 MWh standalone BESS in Tongliao, Inner Mongolia, has begun commercial operation following a five-month construction period, reflecting China's ...

China's surge in renewables and whole-economy electrification is rapidly reshaping energy

choices for the rest of the world, creating the conditions for a decline in global fossil ...

The country is installing solar, building EVs, and investing across energy at a rapid clip. China is the dominant force in next-generation energy technologies today. It's pouring ...

Offshore wind turbines are pictured in the waters of Laizhou City, east China's Shandong Province, Jan. 7, 2025. From the land to the sea, China's pursuit of green energy ...

In the context of the global energy transition from fossil fuels to renewable energy sources, China's legions of wind turbines and seas of ...

Energy is transforming from extracted commodities such as coal, oil and natural gas to manufactured products such as solar ...

Energy is transforming from extracted commodities such as coal, oil and natural gas to manufactured products such as solar photovoltaic panels, wind turbines and batteries. This ...

The country is installing solar, building EVs, and investing across energy at a rapid clip. China is the dominant force in next ...
