
The solar shed can be sealed with glass

Can you put solar panels on a shed?

Yes, you can--but it depends on your shed. Before you buy any solar panels or mounting kits, take a closer look at your shed's roof. Not all roofs are ready for solar. Start with the basics: is the roof strong enough? Most solar panels weigh around 15-20 kg each.

Where do solar panels go on a shed?

Solar panels go on the roof of the shed, so pay attention to its orientation and condition. Your solar-powered shed will be more efficient if the panels are facing south. East and west are second best, but you will still lose around 15% of energy output.

Should you build a solar-powered shed?

All these uses have one thing in common: the need for electricity and an unoccupied roof space that can be put to good use. A solar-powered shed needs just a few solar panels to function. This makes a PV system for this kind of project inexpensive and easy to install. Let's look at some of the reasons why building a solar shed might be a good idea:

What is a solar-powered shed?

Some associate sheds with domestic animals, and yet for others it is a fully equipped shed workshop. All these uses have one thing in common: the need for electricity and an unoccupied roof space that can be put to good use. A solar-powered shed needs just a few solar panels to function.
