
Three-phase investment in folding containers for agricultural irrigation

Is irrigated crop production a viable option for smallholder farmers?

tential for sustainable expansion (IFAD and IFC, 2022). The financing gap for SSI is significant, but it is expected that a substantial proportion of the 500-million-person global market represented by smallholder farmers could benefit from introducing irrigated crop production and increase their net

Can irrigation improve agricultural yields?

Irrigation can lead to agricultural yields two to three times as great as those of rainfed agriculture, allowing for investment in irrigation systems to be recouped because higher-value or higher-yielding crops can be produced.

What is farmer-led irrigation development?

Farmer-led Irrigation Development (FLID) is the process where farmers, alone or as a collective, take the lead in the establishment, improvement, or expansion of irrigated agriculture. Characteristically, farmers who autonomously develop irrigation are entrepreneurial innovators, targeting new markets and investing their own resources.

What are the barriers to accessing financing for agricultural inputs & irrigation technology?

Women, youth, and marginalized groups face additional barriers to accessing financing for agricultural inputs and irrigation technology investments. Lack of access to financing from formal credit providers can prevent marginalized farmers included in irrigation systems from obtaining and using inputs to achieve high yields.
