To use the calculator, simply enter the number of panels you have and the voltage of your system. The calculator will then show you whether it is better to connect your panels in series or parallel. In general, connecting panels in series is best for high-voltage systems, while connecting them in parallel is best for low-voltage systems.

How do I connect multiple solar panels together in series?

How to connect multiple solar panels together in series: Connect the positive (+) cable of one panel to the negative (-) one of the next panel. The female MC4 connector marks a positive cable and the male MC4 is the negative. Continue with the rest until all panels are connected.

Can you connect two solar panels to a power station?

Don't connect two panels with built-in charge controllers: The panels you combine can't have solar charge controllers. If they do, they must first be bypassed. The combination of panels can then be connected to a charge controller or a power station. Do power stations by X come with solar panels?
