# Types of energy storage batteries on the user side

What are the different types of battery energy storage systems?

Different types of Battery Energy Storage Systems (BESS) includes lithium-ion, lead-acid, flow, sodium-ion, zinc-air, nickel-cadmium and solid-state batteries. As the world shifts towards cleaner, renewable energy solutions, Battery Energy Storage Systems (BESS) are becoming an integral part of the energy landscape.

What makes a battery energy storage system a good choice?

The performance, safety, and longevity of a battery energy storage system largely depend on its battery chemistry. Different chemistries offer unique advantages and trade-offs in terms of cost, energy density, cycle life, and fire risk, making it essential to select the right type for each application.

What type of batteries are used in energy storage?

Currently, the market primarily relies on lithium iron phosphate (LiFePO<sub>4</sub>) batteries. Shenzhen GSL Energy Co., Ltd. was established in 2011, specializing in residential, commercial, and industrial LiFePO<sub>4</sub> energy storage systems. GSL ENERGY offers certified LiFePO<sub>4</sub> storage energy batteries for homes, businesses, and utilities.
