
Unplug the base station power supply

How do I fix a faulty base station?

Try resetting the base station and see if this resolves the problem; - Unplug the power supply unit. - Press and hold the paging key on the base station. - Press and hold the paging key on the base station for another 5 seconds, then release it. If it now works you will have to re-register the handsets with the base station again

Does a second-hand power supply work on a c430a?

I have obtained a second-hand power supply for the C430A, and everything works (saved numbers, paging handsets, handset identities, handsets connect to base station) EXCEPT that the base does not see the phone line. Other phones work ok in the same socket. I've tried to have a look inside (removed the 4 star screws) but can't open it up.

Why is my base station pulsing?

If your Base Station is pulsing or solid red, an alarm event may have recently occurred. You can reset your system status and learn more about next steps in this Help Center article. Was this helpful? When troubleshooting your system, there may come a time when you need to reset your Base Station to clear out any errors.

Why is my base station still visible through SteamVR?

If the base station is still visible through SteamVR on your PC, then you should deactivate the "Power Management" feature through SteamVR. While "Power Management" is enabled, your base station will enter a "Standby" mode, turning it on while in use.
