# Wind turbine preheating control system

What is wind turbine control systems?

o the design of LPV gain-scheduled controllers for both fixed- and variable-pitch, variable-speed wind turbines. Wind Turbine Control Systems is primarily intended for researchers and students with a control background wishing to expand their knowledge of wind energy systems.

What is a pitch controlled wind turbine?

Pitch controlled WTs have an active control system which varies the pitch angle of the turbine blades to decrease torque and rotational speed in WTs. This type of control is usually employed in high wind speeds only where high rotational speeds and aerodynamic torques can damage the equipment.

What is the future of wind turbine control?

The future of wind turbine control will go beyond speed and power to deliver intelligence and resilience. These systems will learn from operational data, adapt to environmental and grid changes, and contribute to a more flexible, sustainable energy landscape.

What are advanced wind turbine controls?

Advanced wind turbine controls can reduce the loads on wind turbine components while capturing more wind energy and converting it into electricity. NREL is researching new control methodologies for both land-based wind turbines and offshore wind turbines.
